PROFESSIONAL SUMMARY

Software Engineering undergraduate at the State University of Pará (UEPA), with hands-on experience in web application development, mobile applications, and process automation. Primarily works with React, Node.js, JavaScript, Python, and API integrations, developing solutions focused on productivity, user experience, and process automation.

Interested in software engineering, system architecture, automation, artificial intelligence, and information security, continuously improving technical skills through real-world projects and technological challenges.

TECHNICAL SKILLS

Programming Languages: JavaScript, Python, SQL, GDScript Frontend: React, React Native, HTML, CSS Backend: Node.js, REST APIs, Webhooks Databases: PostgreSQL, Supabase, Firebase Tools & Platforms: Git, GitHub, Docker, n8n, Figma, Godot Engine Concepts: Software Architecture, API Integration Additional Areas: Process Automation, UX/UI, Web Application Security

EDUCATION

Bachelor's Degree in Software Engineering

2022 – 2026

- State University of Pará (UEPA)

PERSONAL PROJECTS

Intelligent WhatsApp Copilot | Mobile & Web Application

- Automation system for WhatsApp customer support with voice commands.
- Full Stack development using React, Node.js, and PostgreSQL.
- Integration of Speech-to-Text (STT) and Text-to-Speech (TTS) modules.
- Implementation of hands-free automation workflows.
- Design of application architecture and inter-service communication.

Affiliate Marketing Automation with n8n | Automation

- Automated pipeline for tracking and promoting affiliate offers.
- Integration with external APIs and webhooks using JavaScript and n8n.
- Creation of automated workflows for content collection, curation, and distribution.
- Continuous 24/7 automated operation.

Brotar+ | Mobile Application

- Mobile application focused on the digitalization of small local businesses.
- Participation in UX Research and UX/UI Design activities.
- Developed using React Native and Supabase.

Climatic Adventure | Web Game

- Educational game focused on raising awareness about climate change.
- Developed using Godot Engine and GDScript.
- Implementation of gameplay mechanics and progression systems.

PROFESSIONAL EXPERIENCE

Software Engineering Intern | 25Midia LTDA

Out 2025 – Abr 2026

- Developed and maintained the company website, including feature implementation and testing.
- Provided technical support and troubleshooting for internal systems and software.
- Managed and tracked tasks using tools such as Trello and spreadsheets.
- Produced technical documentation and maintained records of implemented solutions.
- Integrated the corporate website with the company's internal organizational processes.
